Dear Chuck,

I would like to let you know how happy we are with the performance of your Hydrotek flush valves. We have over 900 Sloan valves at Alltel Stadium. As you may have heard during Super Bowl 39 we experienced an almost catastrophic event. The city water dept. contaminated our water with a large amount of sand causing the Sloan valves to malfunction and stick open during the Super Bowl. Inadvertently causing a drop in water pressure and an overflow of water into our sewer system.

The phone room was flooded within an inch or two of shutting our entire phone system down. Sewage backed up in the Jaguars office areas and if it was not for the help of the Jacksonville Fire Dept. and a lot of our employees the sewage would have backed up in the team locker rooms. Months later after still experiencing problems with sand and the Sloan valves we started looking for alternate solutions. One of those was your Hydrotek flush valve that we bench tested by packing sand into the valve. No matter what we tried the flush valve did not fail. We installed 50 Hydrotek valves in problem areas and they work flawlessly. There is a bonus to using the valves and that is the restrooms remain cleaner because of the automatic flush feature.

I would highly recommend your product to anyone with or without sand problems. We are thankful that your flush valve has resolved our problems and we will be replacing the rest of our valves with Hydrotek in the future. Thanks for the great product and all the help from Bob Delay.

Thanks you

Steve Johnson
