Mr. Chuck Bowman
Hydrotek International, Inc.
957 North Pennsylvania Avenue
Winter Park, FL 32789

Dear Chuck,

I am writing this letter to express just how pleased we are with Hydrotek flush valves. Over many years we have attempted to standardize the flush valves in our facilities with the products of one manufacturer – only to be disappointed time after time with the results. That is until we began to test, evaluate and use the Hydrotek flush valves.

Chuck, not only have we been impressed with the actual performance of the Hydrotek flush valves, but also, we have experienced absolutely minimal problems with your flush valve. Additionally, we have found the product support from Hydrotek to be absolutely second to none.

In addition to eliminating the aggravating and frustrating problems with other flush valves, there are also the economic factors involved. We currently estimate that we will save many thousands of dollars annually by switching to Hydrotek flush valves by (1) eliminating the cost of diaphragm repair kits (and the contributing labor) due to Hydrotek's piston design, (2) eliminating the cost of man-hours to correct run-on conditions due to supply water debris and (3) eliminating the costly sensor eye replacements that we have experienced with other manufacturers' flush valves.

Due to our success in testing and using Hydrotek products, it is now our intention to retrofit 100% of all of our terminal restrooms with your flush valve. Additionally, our plans call for a complete remodel of all airport restrooms within 5 years. As part of our terminal life extension project, the Hydrotek flush valve will be our choice for this project.

Thank you again for your support and for introducing us to these superior products.

Sincerely,

Al Ferreira

Plumbing Supervisor
